wood fireplaces.

York Fireplace Insert

York in gold bay window trim and gold filigree reveal trim adds an exciting and decorative feature to your fireplace.

When you upgrade your inefficient woodburning fireplace to a sealed combustion York fireplace insert, you continue to burn wood, only in a cost-effective, easy-to-handle pellet form. With the unit's 40 lbs. of pellet capacity, the York, set on LO, will burn continuously for up to 33 hrs. And, with the digital control's **SmartStat** thermostat feature, combined with its standard wall thermostat, the York fireplace insert will maintain a consistent, preset room temperature automatically.

Benefit from the Warmth and Ambiance of a Wood Fire Without all the Inconveniences

As the first autumn frost descends, people seem to be instinctively drawn to the warmth of a fire's glow, and for good reason. A fire not only warms the hands—it also soothes the soul!
Now you can enjoy the warmth and ambiance of a wood fire in a much cleaner, more efficient way. Wood pellet stoves and inserts make heating with wood both practical and efficient.

Wood pellets are a natural, renewable source of energy. They are made from wood by-products, reclaimed from saw mills and wood-based manufacturing plants. This clean, economical fuel eliminates the splitting, hauling, stacking, and cleanup associated with traditional wood fires. Typically pellets are available in easy-to-handle 40-pound bags, and require only one-third of the space needed to store the same amount of usable energy in cord wood form. Most important: when you burn wood pellets in your St. Croix stove or fireplace insert you are using one of the cleanest, most economical home heating fuels available. Since your St. Croix stove or insert maintains precise air-to-fuel ratios, it burns hotter and cleaner. The result is minimal emissions into the atmosphere and dramatically fewer stove cleanings.

With all these benefits it's easy to see why St. Croix wood pellet stoves and fireplace inserts have become an excellent choice for heating homes today.

The St. Croix Advantage—Even More Convenience

State-of-the-Art Digital Controls with SmartStat
All St. Croix stoves and inserts are equipped with touch pad digital controls featuring the automatic lighting and relighting of the unit in the event of a power failure. The control unit also slides out of view when not in use.

The control's **SmartStat** feature and standard wall thermostat make it possible for the pellet unit to automatically maintain a consistent, preset room temperature.

VersaGrate Cleaning System and Convenient Ash Drawers

All St. Croix units feature a self cleaning grate system allowing the burning of a wide variety of pellet fuels. With just a couple of tugs on the grate scraper, virtually any residual ash is dropped into the ash drawer. No other pellet unit can go so long between cleaning. Front access ash drawers are standard. The York insert features a unique three-drawer system.

Easy to Fill Pellet Hopper
St. Croix stoves and inserts have pellet hopper capacities ranging from 40 lbs. in the York insert to 75 lbs. in the Prescott EXP and EXL stoves.

All units have top loading pellet hoppers for easy loading and quick visual checking for refilling.

Additional St. Croix Features:

- Optional trim. Gold or nickel plated trim items that won't tarnish.
- Built-in heat tube scraper. It makes cleaning the heat exchanger quick and easy.
- Stainless steel heat exchanger.
- Quiet operating motors and fans. Our research has found the most reliable and quiet components available in the industry.
- Large, durable ceramic glass. It allows for safe viewing of the fire.
- Optional ceramic logs. They make the fire even more realistic.

Hastings brings to life the rich traditions of the cast iron wood stoves, but it's uniquely designed to burn economical, wood pellet fuel.

Hastings Cast Iron Stove

Its classic federal style with its radiant door detail makes the Hastings a warm and beautiful addition to any room in your home.

The functional doors give you a large fireview when open. Its optional ceramic logs (shown in Afton Bay) make viewing the fire even more dynamic.

Hastings created a whole new dimension in pellet stove design and was a finalist for the coveted Vesta Award at its introduction at the Hearth Products National Expo.

Afton Bay features the popular bay window view of its fire. It also features a full pedestal ash drawer and a pellet hopper capacity of 65 lbs. for longer burns between refilling.
