

Warped, broken, or leaky dampers cost homeowners hundreds of dollars a year!

Keep heat and energy in...rain and animals out.

If it's not the cold drafts on your feet, it's the high energy bills in your mailbox. You've got a fireplace problem you probably don't know about. It's your damper. It leaks. Not a lot mind you, but enough to be costing you over \$200 a year in lost energy.

The Lock-Top Damper seals tight with a silicone rubber gasket

That's right, our damper seals with a rubber gasket, not metal to metal like your current damper. A Lock-Top Damper seals tight, so virtually no air, and thus no heat or air conditioning gets lost up your chimney. The Lock-Top also eliminates downdrafts, seals out rain which can deteriorate the inside of your chimney, and prevents entry by pests like squirrels, raccoons, and nesting birds.

The Lock-Top mounts on top of your chimney

On top? Yes, that is the perfect location to create an airtight seal. A cable drops down your flue and attaches to a handle which mounts where you can reach it for convenient opening and closing.

Superior stainless steel and cast-aluminum construction equal a lifetime warranty

The Lock-Top Damper is made of cast-aluminum and stainless steel, precision fitted with our special silicone rubber gasket. These high-quality materials add up to a factory lifetime warranty for you.

Lock-Top Dampers are available from chimney and hearth professionals

Professionals stake their reputation on what they sell. Lock-Top Dampers are only sold through professionals because it takes a professional for proper sizing and installation.

Say "yes" to savings

Put the Lock-Top Damper to work for you. Save energy, stay warm, protect your chimney from moisture and your home from pests. These benefits will all be yours when you say 'yes'to Lock-Top.
